UiPath Studio Community

Open

Open a Local Project
Navigate and open an existing project

Clone or Check Out
Open from source control repositories like GIT, TFS or SVN

New Project

Process
Start with a blank project to design a new automation process.

Library
Create reusable components and publish them together as a library. Libraries can be added as dependencies to automation processes.

Test Automation
Start with a blank project to create a new test project

Template
Create a template that you can use to build automations that have a set of predefined common characteristics.

New from Template

Background Process
Create a process that starts in the Background and can run concurrently with other processes for as long as it doesn't use UI interaction.

Mobile Testing Project
Create a project for your mobile app automated test cases

Orchestration Process
Implement a process through service orchestration and human intervention as well as through long-running transactions

Per-user Installation

Restoring Dependencies...

Restoring Dependencies...

Apps

UI Explorer
Use UI Explorer to inspect the user interface of applications. Opening UI Explorer from Studio context will use the UI automation libraries shipped with the current version of Studio.

Project Dependencies Mass Update Tool
Manage dependency versions and runtime rules across multiple projects stored locally or in SVN/TFS repositories. Edit versions, review changes, check in projects, and publish the updated projects to Orchestrator, a custom feed or locally.

Repair Tool for Microsoft Office
Tool which attempts to repair the Office installation and enable its interoperability features

UiPath Extensions

Chrome
Installs the browser extension for automating websites in Chrome.

Firefox
Installs the browser extension for automating websites in Firefox.

Edge
Installs the browser extension for automating web...

Silverlight
Installs the runtime plugin for automating Silverligh...

Microsoft Remote Desktop and Apps
Install the runtime plugin for automating Microsoft...

Excel Add-in
Install the Excel Add-in for an enhanced editing experience when working with Excel files.

SAP Solution Manager
Configure the runtime plugin for using SAP Solution Manager integration.

UI Libraries

Introducing Object Repository

With Object Repository you can manage your project's UI Descriptors, add them to UI repositories and re-publish them as UI libraries for global reuse.

UI Descriptors can be part of the project for project wide reuse, part of a global repositories for testing purposes or part of UI libraries for global, cross project sharing.
